

Programme	: B.Tech	Semester	: Fall 2020-21
Course Title	Foundations of Data Analytics Lab	Code	: CSE3505
		Class Nbr	: CH2020211001582
Date	: 15/07/2020	Week & Slot	: 3 & L49+L50
Faculty	: Dr. C. Sweetlin Hemalatha & Dr. B V A N S S Prabhakar Rao		

Ex-3a Data Manipulation using dplyr package

Use the newsurvey data obtained by cleaning 'na' values in survey data of MASS package to do the following:

1. Install the dplyr package and import it.
2. Filter all male left handers.
3. Display all female right handers who keep right on top while clapping.
4. Display all students who never exercise.
5. Display only the gender, age and writing hand of the students.
6. Display the age, pulse rate and writing hand span of female left handers.
7. Arrange all male left handers according to descending order of their heights.
8. Introduce a new column hand_span which contains the value as difference between the span of writing hand and non-writing hand and display it along with gender, writing hand and non-writing hand span.
9. Display the average writing span of male and female left handers.
10. Find the maximum pulse rate of male left and right handers.

Note: use dplyr::select while using select operator as dplyr package conflicts with MASS package
