Design a JavaScript application for election polling. The application must have a start page with start button which displays the list of parties and their symbol with radio buttons to choose the option. On submitting the votes have to be incremented. Finally display the vote share with the name of the winning party. Once a vote is cast it must be redirected to the start page. When a vote is to be cast it must permit to vote within 25 seconds else it must be redirected to start page. Voting must start at 8am and stop at 3pm. (For testing assume the current time).
